EXECUTIVE SUMMARY

This report presents an overview of the weekly meetings and facilitation sessions held with student developers in the month of November, 2025. The sessions were designed to encourage collaboration, provide guidance, and track the steady advancement of development projects.

Regular weekly meetings offered a platform for reviewing progress, resolving challenges, and outlining next steps. Each engagement built on prior discussions, helping to maintain continuity, accountability, and effective teamwork. Additional facilitation with Mr. Bernard Sibanda further enriched the process by offering technical direction and expert support that strengthened problem-solving approaches.

A key component of this initiative was the management of source codes through GitHub. By hosting project repositories online, the team benefited from transparent version control, seamless collaboration, and efficient contribution tracking. This not only simplified teamwork but also gave student developers valuable experience in industry-standard practices such as collaborative coding, issue tracking, and maintaining high-quality codebases.

The developer sessions also incorporated code reviews, debugging exercises, and peer-to-peer learning activities, which reinforced best practices and ensured the reliability of outputs.

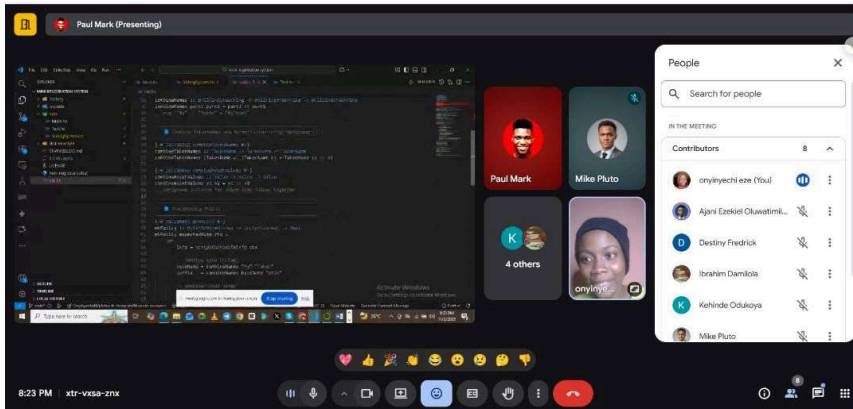

Overall, the combined effect of the meetings, facilitation efforts, and GitHub-driven development process was improved technical proficiency, stronger collaboration, and measurable progress toward project goals. The adoption of GitHub as the primary development hub proved particularly impactful in aligning the team with modern software engineering practices.

5.0 Fascilitation Report: Source Code

(1) Will dApp

A decentralized application (DApp) on the Cardano blockchain for creating and claiming wills securely. Users can lock ADA for beneficiaries with optional partial claims and allow beneficiaries to claim their allocated ADA after a set unlock time.

<https://github.com/Onyinyechi46/Will-dApp>

(2) SWAP dApp

A Cardano-based DApp for secure NFT and token swaps. Sellers lock NFTs in a smart contract to receive tokens, buyers get all specified NFTs, and both parties must sign. Optional expiry times and wallet integration ensure seamless, trustless transactions.
